

CUNO High Flow Filtration Systems

High Flow Performance in a Compact Design

- Innovative technology to achieve flow rates up to 500 gpm per element
- Absolute-rated for consistent product quality
- Operator-friendly cartridge and housing system
- Unique design to reduce capital investment expenses

CUNO High Flow Filtration System

The CUNO High Flow Filtration System is an advanced design that uses 3M Innovation and CUNO's extensive filtration experience to deliver a high flow filter in a compact housing design. When compared to conventional cartridge systems, this system provides the following advantages:

High Flow Capability

The unique construction of CUNO High Flow Filters (patent pending) permits flow rates of up to 500 gpm in a single cartridge. The result? Fewer filter elements to accommodate your flow requirements. In fact, the CUNO High Flow Filtration System requires as few as one-tenth the number of elements as competitive 2.5" pleated cartridges (see Figure 1).

Compact Design

Using fewer elements combined with an outside-to-in flow path enables a reduction in the size of housing required for your application. The CUNO High Flow Housing takes up as little as one-half the size of competitive housings for a given flow rate. The result is lower capital investment costs and a compact footprint that saves valuable plant space (see Figure 1).

Ease of Use

The CUNO High Flow Filtration System is designed with ease-of-use in mind. From a user-friendly, ergonomically designed handle that makes cartridge installation and removal easier without the use of special tools or other hardware, to a unique "twist-to-lock" cartridge seating mechanism that provides a positive seal, the CUNO High Flow System facilitates easy operation and maintenance of your filter system.

CUNO High Flow Filter Applications

Industrial - Municipal Water, RO Prefiltration, Reclaimed Water, Coolants, Nozzle Protection, Boiler Condensate

Chemical - Quench Water, Aqueous Salt Solutions, Final Products

Petrochemicals - Waterflooding, Produced Water, Enhanced Oil Recovery, Completion Fluids, Amine Sweetening, Final Products

Electronics - RO Prefiltration, Process Water

Food & Beverage - Process Water

Pharmaceutical - Process Water

Features	Benefits
 High flow capability of up to 500 gpm per cartridge 	 Reduced Filter Usage – minimizes product loss, labor, disposal costs, operator exposure, and downtime for filter change-out
Patent Pending Compound Radial Pleat design	■ High loading capacity for long life and lower cost filtration
■ Compact design	 Smaller housing minimizes capital expense requirements Reduces system footprint
■ Absolute rating	■ Reproducible effluent quality throughout the filter's life
■ Easy to Use	 No special tools or hardware required for filter change-out – minimizes downtime "Twist to lock" seating mechanism provides positive seal Ergonomically designed handle – facilitates easy cartridge installation and removal
■ FDA compliant	 Compatible in applications requiring direct food contact in food and beverage processing per 21 CFR.

CUNO High Flow Filter

High Performance Media in an Innovative Design

CUNO High Flow Filters are designed using state-of-the-art technology, optimizing both performance and effluent quality to ensure customer satisfaction. The elements use a unique pleat design that results in a high usable filtering surface area per filter.

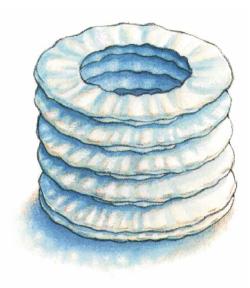

Radial pleat design

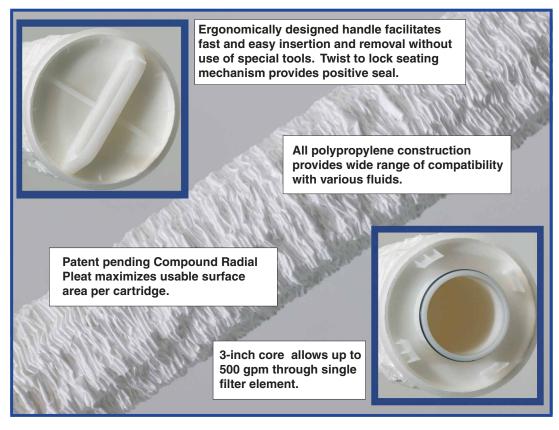

3M Innovation is at the heart of the CUNO High Flow Filter. A patent pending compound radial pleat design maximizes the usable surface area per filter. Blown microfiber forms the basis of the filter media, which is made to tightly controlled fiber diameter specifications to produce a media with absolute rated particle retention characteristics. Our unique manufacturing process embosses the media to produce a more uniform pleat pattern, which, in turn, allows greater utilization of the media by evenly distributing the fluid throughout the entire filter structure. This results in consistent particle retention in a compact, space-saving design.

Design Features

The CUNO High Flow Filter contains several features to combine high performance with easy operation.

Compound Radial Pleat design maximizes usable media surface area

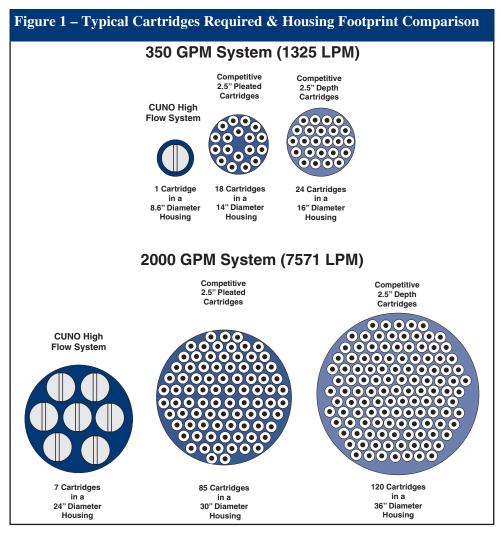

- A large diameter core allows up to 500 gpm through a single filter element.
- An ergonomically designed handle has been designed to facilitate fast and easy insertion and removal without the use of special tools. Cartridges are simply inserted over a built-in guide tube.
- The seating mechanism uses a "twist to lock" design to provide a positive seal.

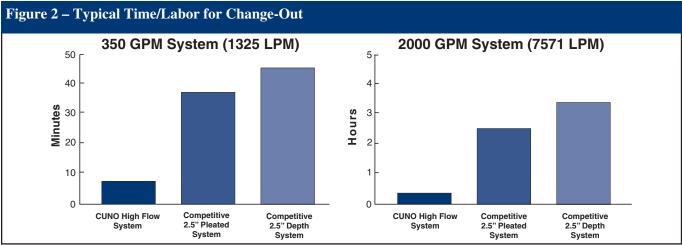

Filter Comparison

Consider the following benefits of the CUNO High Flow System over competitive 2.5" cartridges in a 350 gpm (1325 lpm) and a 2000 gpm (7571 lpm) system*:

- The CUNO High Flow System requires 90% fewer cartridges as competitive 2.5" cartridge systems for a given flow rate.
- CUNO High Flow Housings are 33% to 50% smaller than competitively sized housings for a given flow rate.
- Fewer filters and a user-friendly housing design means faster change-outs than competitively sized systems.

* Comparison assumes fluid viscosity of 1 cp

CUNO High Flow Filter Specifications and Operating Parameters

Materials of Construction

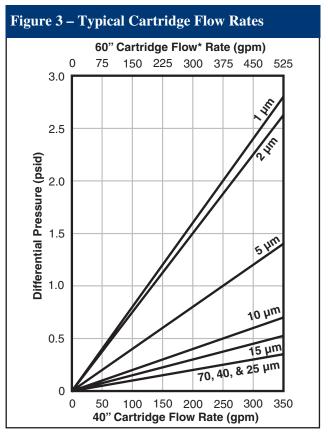

Filter Media - Each grade of the CUNO High Flow Filter is manufactured from meltblown FDA compliant polypropylene microfiber media, providing high particle removal efficiency with broad chemical compatibility. No adhesives, binders, or silicone are used in the manufacturing process. The raw materials composing these filters are FDA compliant according to CFR Title 21. All support layers and hardware are constructed with polypropylene.

O-rings - O-rings are available in a variety of materials to suit your applications, including the standard nitrile, Ethylene Propylene Rubber (EPR), silicone, and fluorocarbon.

CUNO High Flow Filter Element Specifications							
Elements							
Parameter	40" High 60" High						
Removal Ratings (microns) 1, 2, 5, 10, 15, 25, 40, and

CUNO High Flow Housings

The CUNO High Flow Housings are specifically designed to deliver all of the system's benefits in a compact footprint. Housings are available in standard designs, as well as customizable configurations to suit your specific needs. All standard CUNO High Flow Housings are designed,

manufactured, tested, and code stamped in accordance with ASME Section VIII, Division 1. Stainless steel housing external surfaces are glass-bead blasted for a consistent, easy care finish, while carbon steel units are painted.

The CUNO High Flow Housing is available in a variety of sizes to accommodate from 1 to 7 filter elements in both 40-inch and 60-inch lengths. Larger housings are available upon request. Housings are also available in horizontal or vertical configurations, depending on your needs. Choose the horizontal option to maximize ease of operation, or the vertical to minimize the system's footprint.

Features
